

FAR Part 150 Update – Duluth (DLH)

Public Information Workshop | August 2020

Agenda

- Introduction
- Part 150 Study Process
- Short-Term Noise Monitoring Program
- Noise Modeling Methodology
- Existing (2020) Baseline Noise Exposure Map (NEM) Contours
- Future (2025) Baseline NEM Contours
- Elements of a Noise Compatibility Study
- Part 150 Schedule
- Next Steps

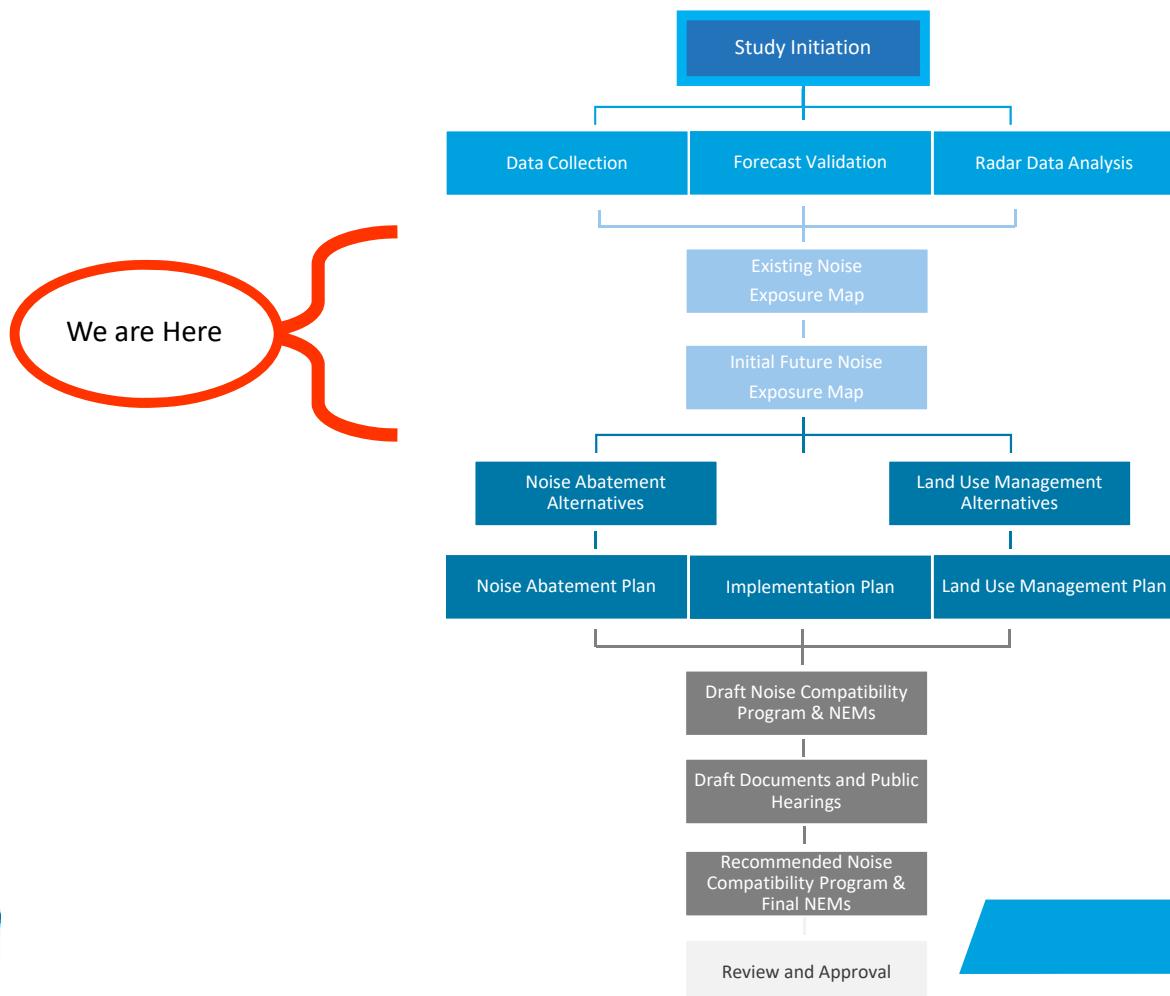

Part 150 Study Process

Essential Elements of a Part 150 Study

- **Noise Exposure Maps**
 - Description of the noise levels for existing and future conditions
 - Future condition should take into account any changes (physical or operational) that may have an effect on the noise levels around the airport
- **Noise Compatibility Program**
 - Recommendations for reducing, minimizing, and/or mitigating aircraft noise and land use conflicts
 - Noise Abatement Alternatives
 - Land Use Mitigation Alternatives
 - Program Management Alternatives
- **Public Involvement**
 - Public information meetings/workshops
 - Public hearings
 - Planning Advisory Committee (PAC)

Part 150 Study Process

Part 150 Study Process

Land Use / Noise Sensitivity Matrix

Per Part 150:		
	Compatible	Compatible with Sound Insulation
Residential		
1-2 Family		
Multi-Family		
Mobile Homes		
Dorms, etc.		
Institutional		
Schools		
Place of Worship		
Hospitals		
Nursing Homes		
Libraries		
Recreational		
Sports/Play		
Amphitheaters, Music Shells		
Camping		
Commercial*	All Uses	
Industrial*	All Uses	
Agricultural	All Uses	

*Appropriate noise level reduction must be incorporated into the design of areas where the public is received, office areas, and other noise-sensitive areas.

How Noise Contours are Generated

User Inputs

Inputs

- Airport Information
- Aircraft Flight Tracks
- Aircraft Fleet
- Number of Operations
- Runway Utilization
- Time of Day
- Aircraft Climb Profiles
- Departure Trip Length
- Meteorological Data
- Topographic Data

Source

- Airport Layout Plan
- FAA Radar Data, Minnesota Air National Guard (MnANG)
- Traffic Flow Management System (TFMS), MnANG
- Tower, TFMS, Air Traffic Activity Data System (ATADS)
- Radar/Wind Data, Radar Data
- Radar Data, TFMS
- AEDT, Radar Data, MnANG
- TFMS
- Climatic Data, AEDT
- Airport Layout Plan, U.S. Geological Survey

Aviation Environmental Design Tool (AEDT)

AEDT-Provided Information

- Aircraft Noise Levels
- Aircraft Performance Data

Types of Aircraft Noise Considered within AEDT

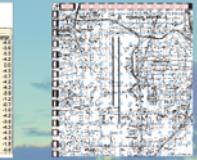

- Arrival
- Departure
- Flyover
- Reverse Thrust (Braking)
- Run-up Noise

Output

Grid Point Analysis

Short-Term Noise Monitoring Program

Methodology

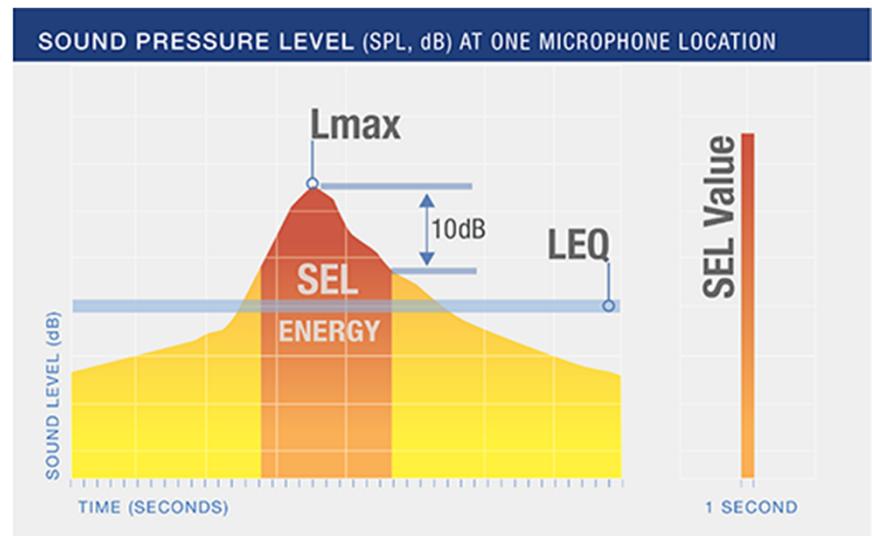

- Twelve (12) sites selected based on public input
- Monitoring occurred at all public recommended sites
- Four (4) additional sites were selected based on location
- Monitoring occurred November 4th – 7th, 2019

Lmax Noise Metric

- Quantifies the peak maximum noise level reached by an entire noise event
- A noise event can be a single aircraft or multiple aircraft at once
- Should not be confused with the Day-Night Average Sound Level (DNL) metric used for calculating Part 150 Noise Exposure Contours

Noise Measurement Results

- Results are analyzed and summarized in report
- Report available at:
https://duluthairport.com/wpcontent/uploads/2020/03/DLH_Temporary_Noise_Measurement_Memo_reduced.pdf
- Noise monitoring data is not used to calibrate the noise model or to make a finding of significant impact

Noise Modeling Methodology

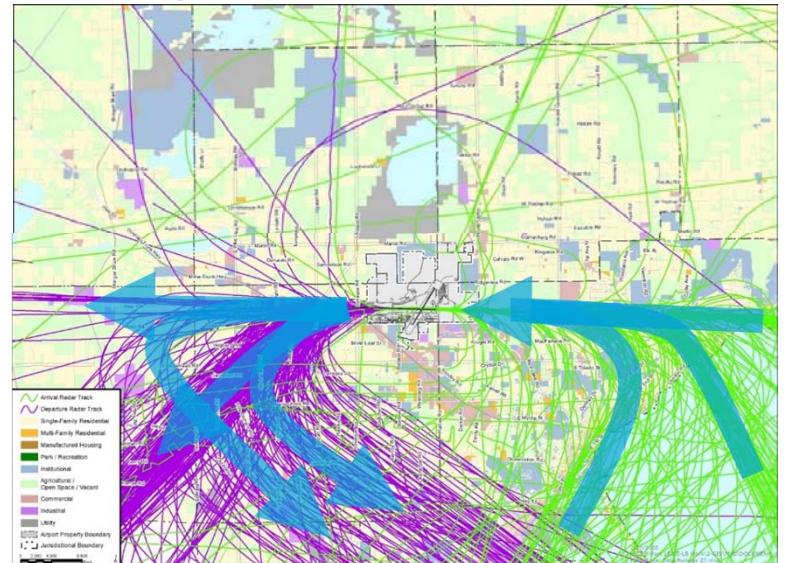

Model and Input Data

- FAA's Aviation Environmental Design Tool (AEDT) Version 3b
- DNL noise metric – required by FAA and Part 150
 - Reflects the cumulative exposure to sound over a 24-hour period
 - Noise level for the average day of the year based on annual aircraft operations
 - Nighttime (10 p.m. – 6:59 a.m.) operations have a 10x penalty
- Began data collection October 2019
 - Data represents previous 12 months (September 2018 – August 2019)
 - Noise Exposure Maps are dated based on the year of submission and five (5) years from the date of submission per Part 150
- Flight Tracks and Runway Utilization
 - FAA's National Offload Program (NOP) data (8 weeks)
 - Flight Tracks are representative tracks based on flight corridors identified in the NOP data
 - Coordination with MnANG 148th Fighter Wing
- Aircraft Fleet Mix , Annual Operations, Stage Length and Time of Day
 - FAA's Traffic Flow Management System (TFMS) – Fleet Mix
 - FAA's Air Traffic Data System (ATADS) – Operations
 - MnANG 148th Fighter Wing – Reported 2,458 Sorties (4,916 Annual Operations) and 199 flying days (24.7 Daily Operations)

Note: Population estimates are based on the United States Census Bureau 2017 American Community Survey (ACS) average household size per number of housing units per census block group. Prison Housing statistics are not included in impacted housing or population counts.

Future (2025) Baseline NEM Contours

Future (2025) NEM Input Data

- No airfield changes
- No airspace changes
- Future (2025) Baseline modeling methodology
 - Master Plan Aviation Forecast
 - 63,560 forecasted operations at DLH by 2025
 - Boeing 717-200 added for new Delta Airlines service
 - Military arm and de-arm run up activity increase (+190.0 Annually/0.95 Daily)
 - AAR maintenance facility likely to be used for similar purpose
 - No change to runway utilization, track utilization, stage length distribution and time of day utilization
- Lockheed Martin F-35 Lightning II
 - Part 150 stipulates the Future (2025) fleet mix is designed from an FAA approved aviation forecast
 - Potential deployment after Future (2025) Baseline
 - If deployed to DLH the Air National Guard would conduct an Environmental Analysis
 - Airport is currently conducting additional analysis using Department of Defense modeling software to compare noise generated from single event existing F-16 and potential F-35 arrival and departure operations at DLH

Future (2025) Baseline Operating Levels and Fleet Mix

Aircraft Type	2025 Annual Operations	2025 Average Annual Day			Percent of Total
		Day	Night	Total	
Large Jets	3,092	3.6	4.9	8.5	4.2%
Regional/Air Taxi Jets	5,746	11.6	4.2	15.7	7.8%
Commuter/Air Taxi Props	2,006	3.1	2.4	5.5	2.7%
General Aviation Jets	18,893	43.2	8.5	51.8	25.5%
General Aviation Props	33,548	71.2	20.7	91.9	45.3%
General Aviation Helicopter	575	0.7	0.8	1.6	0.8%
Civil Aircraft Subtotal	63,859	133.5	41.4	175.0	--
Military Aircraft	5,650	27.6	0.4	28.0	13.8%
Grand Total	69,509	161.1	41.8	203.0	100.0%

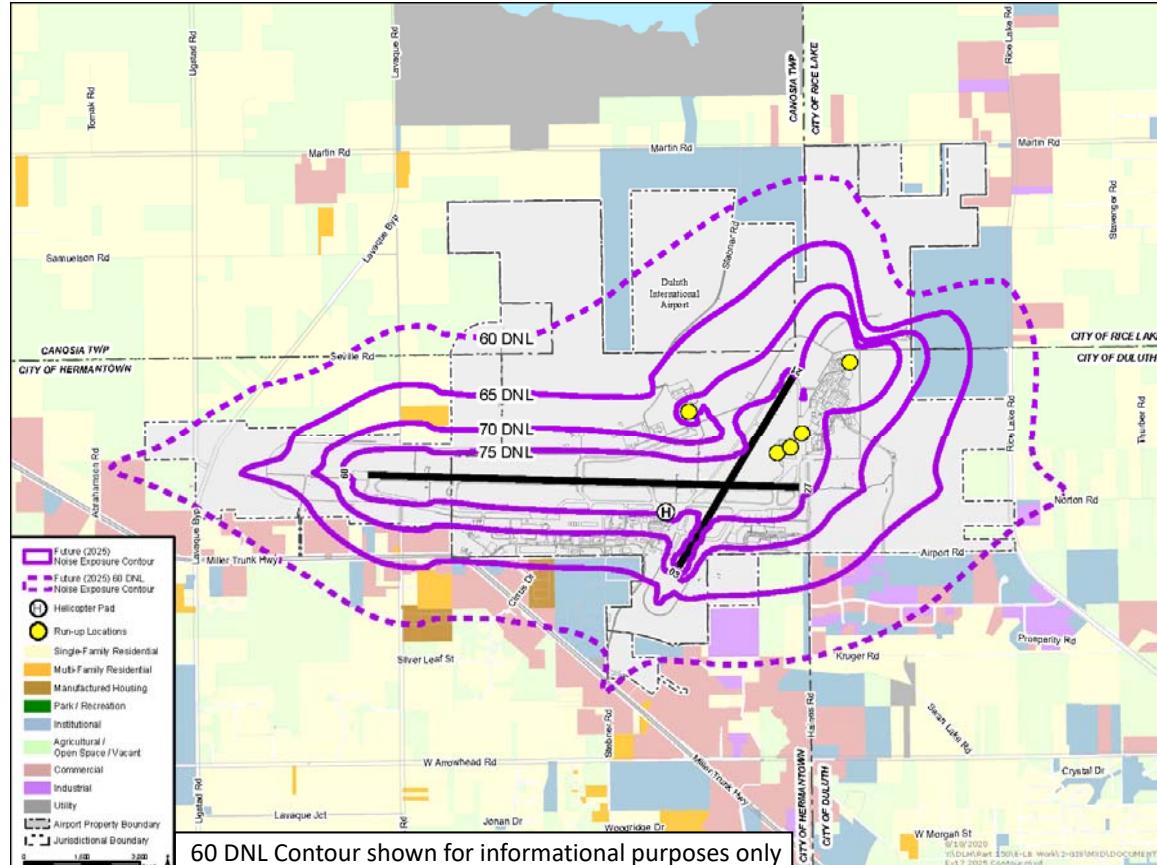

Note: Military operations are based on flying days in a year and not 365 days, MnANG 148th Fighter Wing reported 199 flying days, while the C130 used 250 flying days available (federal holidays and weekends deemed as non-flying days). Totals may not equal sum total due to rounding.

- **Large Jets - Bombardier CRJ-900/700 (63%), Airbus 319-131 (23%)**
- **Regional/Air Taxi Jets - Bombardier Challenger 600/CRJ-200 (67%)**
- **Military Aircraft - Lockheed F-16 Fighting Falcon (94%)**
- **Increase of 9,168 annual operations (26.2 daily operations)**

Elements of a Noise Compatibility Program

Noise Abatement Alternatives

- Purpose: To reduce noise levels in surrounding communities
- Types of noise abatement alternatives
 - Flight Location (e.g., moving arrival and departure flight corridors)
 - Runway Use Program (e.g., how often runway ends are used)
 - Ground Activity Restrictions (e.g., maintenance run-up location/times)
 - Facility Development (e.g., runway extension, noise barriers)
 - Flight Restrictions (e.g., mandatory curfews/restrictions – would require a Part 161 Study)

Land Use Mitigation Alternatives

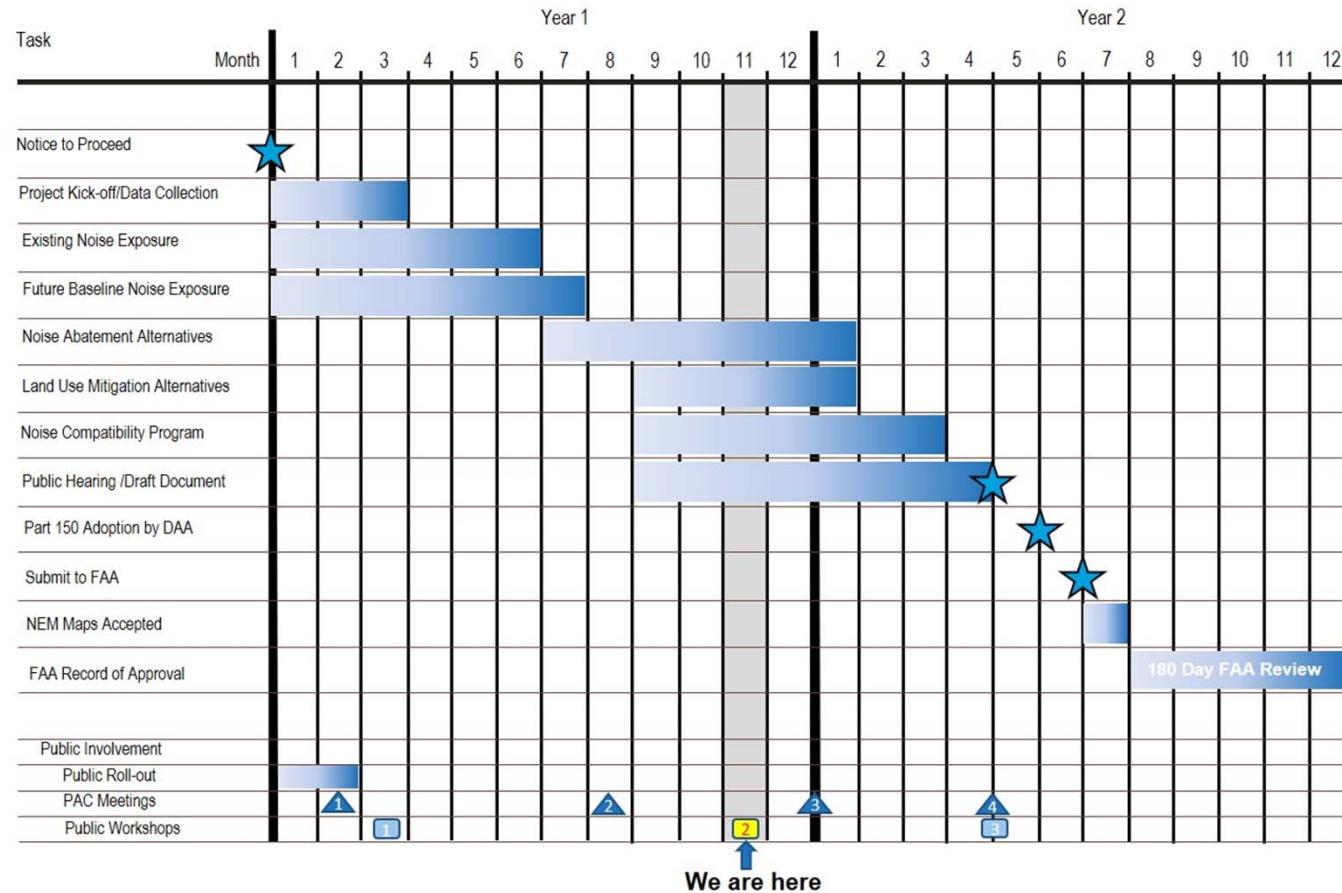

- Purpose: To mitigate noise levels in surrounding communities
- Types of land use mitigation alternatives
 - Corrective (e.g., sound insulation, land acquisition)
 - Preventative (e.g., re-zoning program, land use management overlay/plan)

Program Management Alternatives

- Purpose: To recommend community outreach programs
- Types of program management alternatives
 - Community roundtable/noise abatement committee
 - Noise complaint website or telephone hotline
 - Regular update of NEM and review of NCP

Part 150 Study Schedule

Next Steps

- Next Public Workshop – Late Fall 2020
- Compile suggested noise abatement and land use mitigation alternatives
 - Input from FAA, Public Advisory Committee, airport staff and public
- Begin evaluation of noise abatement alternatives
 - Determine feasibility of recommended alternatives
 - Determine safety issues related to recommended alternatives
 - Determine operational impacts of recommended alternatives
 - Perform a Noise Impact Assessment of recommended alternatives if necessary
- Begin evaluation of land use mitigation alternatives
 - Determine feasibility of recommended alternatives
 - Coordination with local municipalities
 - Develop overlay district and land use management plan
- Prepare draft documentation
- Comments and questions related to the Public Information Workshop may be submitted for a period of 30 days online at: <https://DuluthAirport.com/noise-study/> or emailed to DAA@DuluthAirport.com
